Dr G Mansfeld recorded the progress of his research in tuberculosis in a 1948 issue of the Swiss journal, "Experientia." To the best of my knowledge, the project was primarily concerned with the effect of the central nervous system on immunity to tuberculosis and the research was not completed [ ] in 1949.

25X1X

The general aim of the research in blood cell regeneration was to find or synthesize a drug that would help anemic patients to regenerate blood. The researchers were working on two specific phases in 1949, the effect of darkness on red blood cell regeneration, and the effect of an oil, [redacted] [redacted] None of the research was complete in 1949 and I have not heard of the results being published since that date.

Dr Mansfeld had spent over 30 years of his professional life in research on the influence of the thyroid gland on heat regulation. I do not know how much of his research was completed in 1949, but his textbook in German on the physiology of the thyroid gland gives details of his work.

25X1

There was no Hungarian Academy of Medical Sciences in existence in 1949. I have no reason to believe that one exists today.
